

CSDS — Cyber Security Daemon System

Complete Build Tutorial

Phase 1 — Slackware Base System

- Installation of Slackware 15 minimal environment in VirtualBox.
- Network hardening and secure SSH configuration.
- iptables firewall configuration.
- Disabling unnecessary services.
- Creation of hardened appliance-style environment.

Phase 2 — Zeek IDS Integration

- Installation and compilation of Zeek IDS.
- Creation of custom Zeek scripts.
- Detection engines: scans, SSH bruteforce, threat scoring.
- Automatic Zeek startup through rc.local.

Phase 3 — SQLite SIEM Engine

- SQLite database creation.
- alerts table generation.
- Python alert importer for Zeek notice.log.
- Threat persistence and historical analysis.

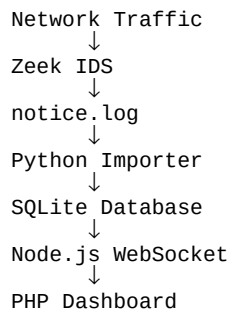

Phase 4 — CSDS Dashboard

- PHP real-time SOC dashboard.
- Threat level engine.
- Top attackers and targeted ports.
- Timeline attack graph using Chart.js.
- Severity classification system.

Phase 5 — Real-Time SOC Appliance

- WebSocket real-time live events.
- Live terminal Matrix-style SOC feed.
- Critical alert engine.
- Automatic watchdog service.
- Log rotation and SQLite cleanup.
- Custom cyber login banner.
- Boot-time monitoring.
- ANSI Matrix cinematic boot sequence.

Architecture Overview

CyberCity Project — CSDS
